Research (v)

Research entails three aspects:
Verbal, Visual, and Experimental

Verbal - reading and discussion: information is obtained from literature in art, architecture, landscape architecture, sociology, philosophy, and the natural sciences.

Visual - information is taken from site observation, analyzing photographs and sketches, and looking at existing built works.

Experimental - discovery of new design and planning concepts, new aesthetics of design, new construction methods, spatial relationships, and innovative design solutions.

Develop abstract relational diagrams. (Hideo Sasaki)
